

Cloud Modernisation

Cloud Modernisation

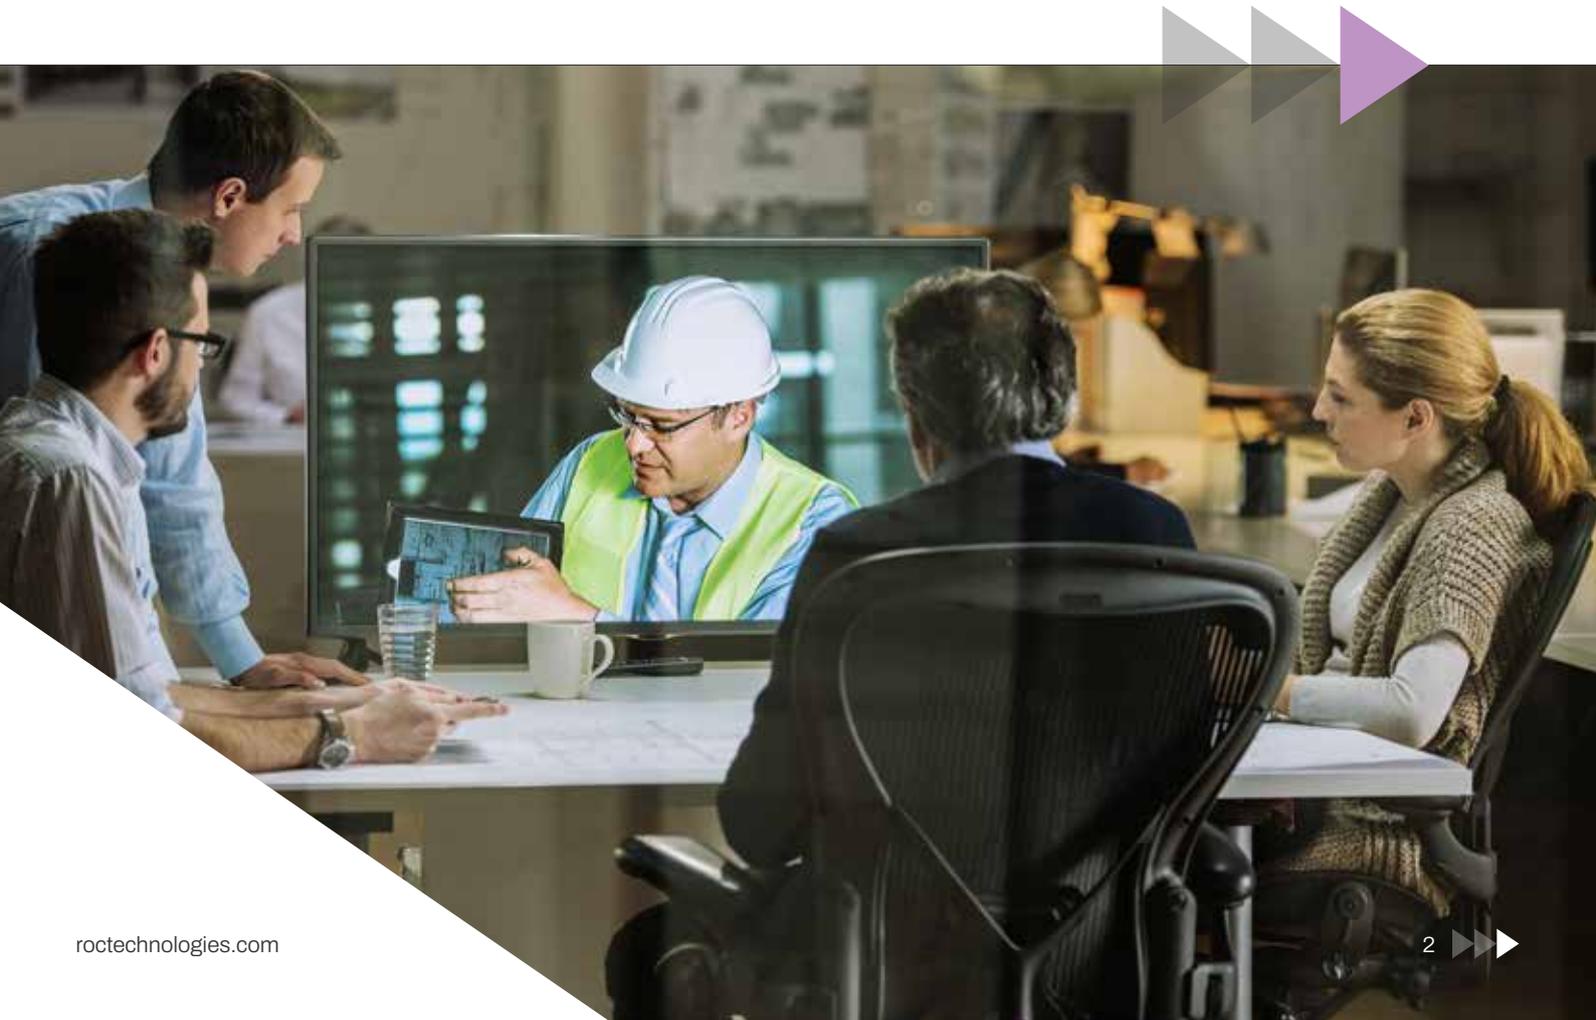

Streamline, secure and optimise your cloud journey

Organisations are under growing pressure to extract more value from their cloud investments. Many early migrations were rushed, driven by urgent timelines or reactive change — leaving behind a mix of legacy infrastructure, inconsistent architecture and spiralling operational costs. Now, with cloud services underpinning critical operations, that lack of strategy has become a barrier to agility, resilience and performance.

At the same time, regulatory demands are tightening, budgets are under scrutiny, and business leaders expect cloud to deliver faster, leaner and smarter. The complexity of multi-cloud and hybrid estates adds to the challenge, making visibility and governance harder — particularly for teams already stretched thin.

There's a growing realisation that modernising the cloud estate is no longer a one-off project, but an ongoing discipline. Businesses need to optimise what they already have, secure it from new threats, and create a flexible foundation for the future — all while managing risk and cost.

Roc brings clarity to cloud modernisation. We help you make sense of your estate, uncover opportunities to simplify, secure and streamline your existing infrastructure, and deliver a roadmap that aligns technology with tangible business outcomes. Our experts work with your teams, not around them — unlocking performance while reducing internal burden.

Creating a strategic advantage

In day-to-day operations, many businesses face the hidden costs of legacy cloud decisions: overprovisioned environments, unclear governance, growing technical debt and platforms that no longer reflect how teams actually work. Security policies often vary by environment, support is reactive rather than strategic, and cloud consumption is poorly aligned to business need — driving cost and complexity.

Cloud tools offer solutions, but without the right expertise and oversight, they rarely deliver on their potential. And for overstretched IT teams, the challenge isn't just knowing what to change — it's having the time and resource to do it.

At Roc, we take a pragmatic, outcome-led approach. Through extensive assessments, we can identify cost savings, security gaps and optimisation opportunities across your cloud estate. Our certified experts bring clarity and structure, helping you implement modern governance frameworks, automate provisioning and security, and simplify ongoing operations.

Whether you're looking to consolidate infrastructure, modernise apps, or build a future-ready hybrid cloud model, we align strategy with delivery. Backed by our 24/7/365 Managed Services Operations Centre offering a full suite of services, we help you get the most from Microsoft tools, while reducing complexity for IT teams and delivering a better experience for your users.

With Roc, cloud modernisation is no longer a burden — it becomes a strategic advantage.

Cloud Infrastructure

Create the right environment to accelerate innovation

For many organisations, cloud has become the backbone of digital transformation — delivering flexibility, scalability and speed to innovate. But maximising its value isn't always straightforward. The rapid pace of change, combined with a growing landscape of tools, platforms and services, can make cloud environments hard to manage, secure and optimise.

As organisations modernise legacy systems, shift workloads to the cloud, and embrace hybrid operating models, IT teams are often stretched thin — juggling performance, cost, compliance and governance, all while trying to deliver a great user experience. Poor visibility, misconfigured environments and underutilised resources only add to the challenge, impacting agility, security and ROI.

At Roc, we work closely with you to understand where you are today and where you want to be. Whether you're consolidating, migrating, modernising or looking to optimise your existing cloud estate, our services are built to simplify complexity, reduce risk and help you move with confidence.

20%

Customers identify an average saving of 20% against their current spend through Roc's Cloud Healthcheck

Cloud Healthcheck

Managing your Microsoft 365 and Azure environments can be complex. Without clear visibility, organisations may be overpaying for underused services while missing opportunities to improve security and operational efficiency.

Roc's Cloud Healthcheck service, powered by SCOUT, provides a detailed analysis of your cloud environment. It offers insight into license usage, adoption, security and infrastructure efficiency. By identifying waste, underutilised resources and security gaps, Healthcheck helps you reduce costs while improving governance, performance and security.

Azure Modernisation

Cloud technologies remain one of the most under-utilized opportunities for businesses to enhance their performance. Many organisations struggle to unlock its potential due to outdated, legacy IT systems and infrastructure. Moving to a modern cloud environment isn't just about keeping pace with technology—it's about driving business growth, improving productivity and enabling smarter, data-driven decisions.

Roc's Azure Modernisation service helps your organisation benefit from a seamless transition to a cloud-first IT strategy. We help businesses take full advantage of cloud technology while minimising risk and disruption. Whether you're looking to improve cost efficiency or strengthen security, we provide the strategic guidance and hands-on support needed to deliver tangible business outcomes.

Modern Workplace

Unlocking workplace potential if needed

Today's workplace looks nothing like it did just a few years ago. With hybrid working now the norm, a rapidly evolving threat landscape, and increasing pressure on IT to do more with less, organisations need a modern digital environment that supports agility, productivity, and security in equal measure.

At the same time, the rapid emergence of AI tools within the Microsoft ecosystem presents a huge opportunity—giving users the ability to work smarter, and giving IT teams powerful new ways to monitor, support, and optimise the environment.

But unlocking that value isn't always straightforward.

Roc can help. Our Modern Workplace services are designed to help you modernise with confidence. We combine Microsoft expertise with a highly accredited team that works alongside your own—augmenting internal capability, reducing pressure and accelerating outcomes. From discovery and roadmap creation through to deployment, optimisation and ongoing support, we provide a full suite of services that help you make the most of the Microsoft ecosystem.

O365 Services

Moving to the cloud is no longer a question of if, but when. For many organisations, Office 365 offers a powerful first step in enabling secure, collaborative, and flexible ways of working. Whether you're currently running on-premises Exchange, legacy collaboration platforms or fragmented productivity tools, the journey to O365 requires careful planning.

Roc's O365 Services are designed to make your transition seamless — minimising disruption, safeguarding data and accelerating adoption across your organisation. Backed by certified experts and proven methodologies, Roc ensures your move to O365 delivers maximum value from day one.

Roc Technologies is a
designated partner Solutions
Partner for Modern Work

Windows 11 Discovery and Deployment

Windows 11 represents more than just a new operating system—it's a key enabler of secure, intelligent and seamless end-user experiences. Many IT teams find themselves facing significant challenges in rolling out Windows 11 successfully: assessing device readiness, managing compatibility, managing performance and user adoption.

Roc's Windows 11 Services are designed to take the complexity out of your migration journey. We'll help you design, deploy and manage the transition with minimal disruption. Our accredited engineers and consultants bring proven methodologies and extensive technical expertise to ensure your Windows 11 rollout is aligned to business goals.

Windows Device and Endpoint Services

Workforces are increasingly mobile and hybrid. Organisations must manage and secure devices in a way that's scalable, efficient and user-friendly. Traditional methods of imaging and provisioning are time-consuming, manual, and often inconsistent. This places unnecessary strain on IT teams and slows down user onboarding.

Roc's Device and Endpoint Services are designed to modernise the way your devices are deployed, configured and managed using Microsoft Intune and Windows Autopilot. With a cloud-native, zero-touch provisioning model, we help you streamline operations, strengthen endpoint security and improve the experience for users and IT teams.

Roc's in-house Managed
Services Operations Centre

Azure Virtual Desktop Services

Businesses need to deliver secure, seamless access to corporate resources from anywhere - evolving to support flexible, hybrid, and remote-first models. Azure Virtual Desktop (AVD) streamlines this shift, giving organisations the ability to manage desktops centrally, enabling employees to access their familiar apps and workspaces from any device, at any time.

Roc's AVD Migration Services take the risk out of your move to the cloud. We bring extensive experience in both Microsoft platforms and virtual desktop infrastructure (VDI), enabling smooth, secure migrations that are tailored to your environment

AI Acceleration service

Artificial Intelligence is transforming the way businesses operate. Adopting AI without the right data structures and security controls can expose organisations to significant risks - data leaks, compliance issues, and governance challenges to name a few. If you want to leverage AI's potential while safeguarding critical information, you need a structured approach to AI readiness and security.

Our AI Acceleration Service allows organisations to implement AI securely and strategically. By assessing security policies and governance frameworks in the context of AI, we help IT teams and business leaders optimise AI adoption. Employees can harness AI tools such as Microsoft Copilot with confidence.

Cloud Security

Smart cloud security to protect your people and data

Cloud transformation has unlocked new levels of agility, collaboration and innovation—but it's also brought new challenges when it comes to protecting data, users and devices. As businesses adopt hybrid and remote working models, embrace SaaS platforms, and store more information in the cloud, traditional security boundaries no longer apply. Sensitive data moves fluidly across apps, devices and locations, and IT teams are expected to keep it secure while still enabling productivity.

That's where Roc's cloud security services help.

We work with you to improve your visibility and control across cloud environments, implement smart policies that protect sensitive data, and strengthen endpoint security without disrupting the user experience. With support from our certified experts, you can streamline compliance, reduce manual overhead and adopt a more proactive approach to risk.

Endpoint Management Services

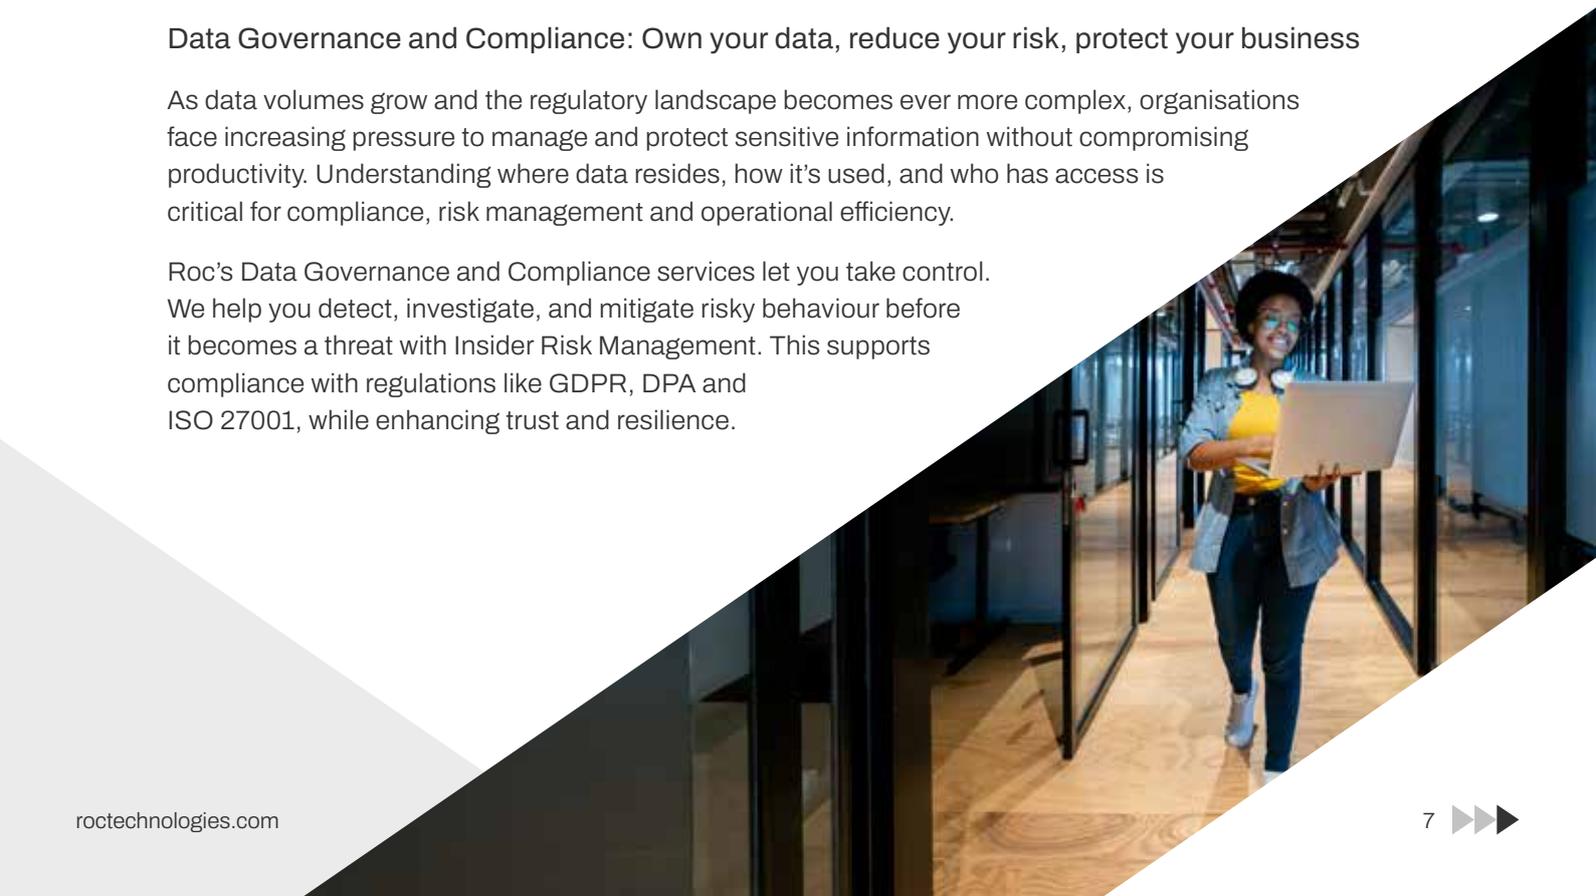

Securing every device is becoming more and more complex with endpoints spread across remote, hybrid and on-premises environments. It's also more critical than ever. Microsoft Defender offers a powerful, built-in approach to threat protection.

Roc's Endpoint Management Services help businesses take full advantage of Microsoft Defender. Our services combine technical expertise with strategic support to ensure your devices are secure, compliant and aligned to best practice. If you're strengthening threat defence or embedding Microsoft Defender into a wider Intune-based solution, we help IT teams take control of their endpoint strategy.

Data Governance and Compliance: Own your data, reduce your risk, protect your business

As data volumes grow and the regulatory landscape becomes ever more complex, organisations face increasing pressure to manage and protect sensitive information without compromising productivity. Understanding where data resides, how it's used, and who has access is critical for compliance, risk management and operational efficiency.

Roc's Data Governance and Compliance services let you take control. We help you detect, investigate, and mitigate risky behaviour before it becomes a threat with Insider Risk Management. This supports compliance with regulations like GDPR, DPA and ISO 27001, while enhancing trust and resilience.

Roc Technologies

Securing your digital future

Roc Technologies are uniquely positioned and proven in the market, with the scale, expertise and partnerships to move forward securely and at speed. We are trusted networking partners to a diverse client base across sectors including Government, Defence, Professional Services, Retail and Higher Education.

Our people host a wealth of cross-industry experience, advising, monitoring, securing and building resilient digital infrastructures for our customers, as well as safeguarding their valuable assets.

We also understand that every organisation's infrastructure and system requirements are unique, which is why we tailor your solution to your organisation's specific requirements, employing best-of-breed technologies that deliver measurable, tangible outcomes along the way.

Whether you're expanding, modernising, or transforming how your people work, a resilient, intelligent network is critical to success. It's not just about keeping the lights on—it's about powering what's next.

Why Roc?

24/7/365 In house MSOC	100% UK coverage	70+ highly trained engineers	100% engineers SC or DV cleared
CYBER ESSENTIALS PLUS accredited	ISO9001 accredited	ISO14001 accredited	ISO27001 accredited
